INSTALLATION INSTRUCTIONS

Flexible Dipstick Assembly #620-910502

Components:

- 1 EA - 3/8" Dia. X 20" Long Nyla-Flow Tubing
- 1 EA – Chrome Plated Dipstick
- 1 EA – Fitting
- 1 EA – Adel Clamp

Step 1

Install the dipstick assembly in the appropriate mounting position in the oil pan and secure.

Step 2

Fill the engine/oil pan with the appropriate amount of oil, i.e. 10 quarts in a 10 quart capacity pan.

Step 3

The dipstick tube is provided longer than necessary to allow you to trim it to suit your specific application for proper readings. Depending upon the angle your boat sits in the water the exact length of the tube may vary with the angle your boat normally rests. With the proper amount of oil in your engine you may now trim the tube back to the point where your dipstick registers at the full mark.
